Bank.Green Director, Founder

x22 2020-ongoing

- a project to restrict financing of fossil fuels
- built four teams: two P&E, two research
- Designed to foundational culture, processes, UX flows, infrastructure

https://bank.green

Watchtower

x4 2025-ongoing

- a system evaluating financial institution sustainability policies
- built and directed team
- determined architecture, project direction
- built sections of backend data processing infrastructure

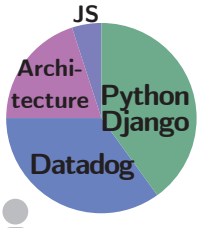

https://watchtower.bank.green

Zelda (Systems Migration)

x4 2021-2022

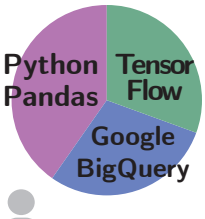

- migration of live data collection, auth, and cleaning systems
- managed team building and modifying data ingestion systems
- built migration validation scripts
- migrated 100's of systems

End to End Monitoring

x4 2021-2022

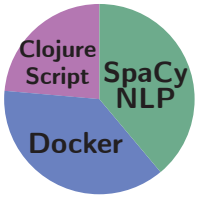

- a project to monitor terabytes of data collection, processing, comms
- installed counters in key functions
- created, configured systems generating Datadog monitors, dashboards
- 40% reduction in engineering and operations toil

Ocean Shipping Predictions

x1 2018-2019

- web API predicting cargo vessels' next ports of call and arrival times
- engineered, interpolated, cleaned data, prototyping and implementing algorithms
- wrote backend server
- various techniques: sequence generators, DNN's, Markov chains, auto ML ensembles

Transcript Transcription

2019

- web app ingesting contorted transcript images and exporting structured data
- wrote service for image deskewing
- created services for text id & extraction
- contributed to frontend

xN = number of people managed
